

Given the description, write an algebraic rule to represent the transformation. Then graph the pre-image and image on the graph below. Use $\triangle ABC$ with $A(2,-2)$, $B(3,1)$, and $C(1,2)$.

1) $\triangle ABC$ is rotated 180° then dilated by a factor of two about the origin.

$$\begin{array}{lll}
 A(2, -2) & B(3, 1) & C(1, 2) \\
 A'(-2, +2) & B'(-3, -1) & C'(-1, -2) \\
 A''(2 \cdot (-2), 2 \cdot 2) & B''(2 \cdot (-3), 2 \cdot (-1)) & C''(2 \cdot (-1), 2 \cdot (-2)) \\
 & (-6, -2) & (-2, -4) \\
 & (-4, 4) &
 \end{array}$$

Algebraic Rule: $(x, y) \rightarrow (-x, -y) \rightarrow (-2x, -2y)$

2) $\triangle ABC$ is reflected over the y-axis and translated by the vector $\langle -4, -5 \rangle$.

$$\begin{array}{lll}
 A(2, -2) & B(3, 1) & C(1, 2) \\
 A'(-2, -2) & B'(-3, 1) & C'(-1, 2) \\
 A''(-2 - 4, -2 - 5) & B''(-3 - 4, 1 - 5) & C''(-1 - 4, 2 - 5) \\
 & (-6, -7) & (-5, -3)
 \end{array}$$

Algebraic Rule: $(x, y) \rightarrow (-x, y) \rightarrow (-x - 4, y - 5)$

3) $\triangle ABC$ is reflected over $y = -x$ and translated up 2 units.

$$\begin{array}{lll}
 A(2, -2) & B(3, 1) & C(1, 2) \\
 A'(2, -2) & B'(-1, -3) & C'(-2, -1) \\
 A''(2, -2 + 2) & B''(-1, -3 + 2) & C''(-2, -1 + 2) \\
 & (2, 0) & (-1, -1) & (-2, 1)
 \end{array}$$

Algebraic Rule: $(x, y) \rightarrow (-y, -x) \rightarrow (-y, -x + 2)$
